

II. EVALUATION CRITERIA (10-POINT SCALE)

Category	Weight	Excellent (9-10)	Good (7-8)	Fair (5-6)
Core Technical Execution	3.0 pts	Flawless contract logic; proficient use of Hardhat/Foundry; seamless Frontend integration.	Functions with minor logic bugs; standard tool usage with clear understanding.	Basic functionality works, but code is disorganized.
Algorithmic Logic & Anti-Clone	2.5 pts	Clear custom math modeling (Bonding curves/ZK) preventing simple code cloning.	Correct application of theoretical concepts (ECC, PoS) with minor modifications.	Heavy reliance on boilerplate code with minimal custom logic.
Security, Gas & Performance	2.0 pts	Robust security (Reentrancy guards); optimized Gas usage; efficient storage.	Follows standard security best practices but lacks advanced Gas optimization.	Basic security present, but code is highly inefficient.

Technical Documentation	1.5 pts	High-quality report; clear architecture diagrams, math proofs, and setup guide.	Well-organized report: covers technical aspects but lacks depth in analysis.	Descriptive but lacks technical rigor; missing diagrams.
Teamwork & Presentation	1.0 pt	Excellent collaboration; polished live demo; professional defense of choices.	Good coordination; functional demo; answered most technical questions.	Demo had minor issues; uneven contribution during Q&A.
